

SMARTer MANAGER

INVENTORY

SMARTer Manager's Inventory Module for materials management can track everything from raw material to finished goods. Where materials are located on the shop floor and if they are allocated to a job or waiting for the job to start is very important.

When an order is created, the system automatically checks for inventory of the material. If the material is in inventory it is then allocated to the job, and the material reserved. If the material is not available, a material requirement will be issued to the purchasing module. Upon the receipt of the purchased materials, it is automatically released to the job. With this kind of closed-loop material resource planning, lead times are forecasted accurately and the production schedule can be accurately maintained.

Finding and locating inventory items is simple: search by part numbers, job numbers, assembly numbers, product line, and drawing numbers; all cross referenced and available through the Fast Find feature.

Features

- * Inventory cost valuation offers you the choice of average, standard, last, LIFO, FIFO.
- * Single or multiple warehouses, with the ability to transfer stock.
- * Lot and serial number tracking.
- * Detailed transaction history for each inventory item.
- * Automatic material issuance for work orders, operations, and sub-assemblies.
- * Price schedules for quantity, discounted, and contract pricing.
- * Re-order or re-stock alerts.
- * Track inventory owned by your customers or suppliers.
- * Unlimited notepad for tracking. Price schedules for quantity, discounted, and contract pricing.
- * Re-order or re-stock alerts.
